

The Web Archive (DWA)

A full-service solution for web archiving

DWA is full-service solution for archiving web content. Our experience is your benefit.

oia now offers a full-service solution for archiving web content. Your advantages: You don't need expansive IT infrastructure or to cope with the complexity of a web content archive system. Benefit from our long-standing expertise in web archiving. Our customers and partners are global players, companies and NGOs, among them the German National Library.

Selective archiving

You name the web pages to be archived. We provide advice on complex technical matters such as professional and functional archiving of flash pages and video streams or the frequency in which you wish to crawl and archive your web sites.

Indexing

We assist you with the set up of your *DWA* archive to which you have exclusive access, regardless of whether you want to archive only a few or thousands of crawls. With *DWA* you can organize your archive professionally and never lose track of your archived material.

Deployment

We carry out the process of crawling the desired web content on our server systems and provide the necessary quality assurance. You only need a browser for the access and use of your archive, including full-text search.

Long-term storage

Your data will be stored in the ISO-compliant WARC format (ISO 28500). Upon request you will receive a copy of the archived crawl in the WARC file format online or offline on a suitable storage medium.

Cost

Costs depend on the complexity and the volume of pages to be archived. Please contact us for an individual offer.
